CAUTION

Lead Free Soldered Boards

The circuit boards listed below [Table 1] used in these models may have been processed using Lead Free Solder. The boards are identified by the LF logo located close to the board designation e.g. F1, H1 etc [see examples]. The servicing of these boards requires special precautions to be taken as outlined below.

example 1

example 2

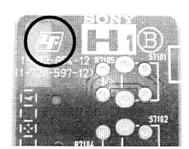

Table 1

Board	Function
С	R,G,B Out
D2	Smart Mode Deflection
D3	4:3 Switching
F2	Power Switch/SIRCS
F3	AC Input/Fuse
H2	Audio In, Y/C In, Headphone In
VM	Velocity Modulation , Dynamic Focus & DQP

It is strongly recommended to use Lead Free Solder material in order to guarantee optimal quality of new solder joints. Lead Free Solder is available under the following part numbers:

Partnumber	Diameter	Remarks
7-640-005-19	0.3mm	0.25Kg
7-640-005-20	0.4mm	0.50Kg
7-640-005-21	0.5mm	0.50Kg
7-640-005-22	0.6mm	0.25Kg
7-640-005-23	0.8mm	1.00Kg
7-640-005-24	1.0mm	1.00Kg
7-640-005-25	1.2mm	1.00Kg
7-640-005-26	1.6mm	1.00Kg

Due to the higher melting point of Lead Free Solder the soldering iron tip temperature needs to be set to 370 degrees centigrade. This requires soldering equipment capable of accurate temperature control coupled with a good heat recovery characteristics.

For more information on the use of Lead Free Solder, please refer to http://www.sony-training.com

WARNING (UK Models only)

The flexible mains lead is supplied connected to a **B.S. 1363** fused plug having a fuse of **5 AMP** rating. Should the fuse need to be replaced, use a **5 AMP FUSE** approved by ASTA to **BS 1362**, ie one that carries the mark.

IF THE PLUG SUPPLIED WITH THIS APPLIANCE IS NOT SUITABLE FOR THE OUTLET SOCKETS IN YOUR HOME, IT SHOULD BE CUT OFF AND AN APPROPRIATE PLUG FITTED. THE PLUG SEVERED FROM THE MAINS LEAD MUST BE DESTROYED AS A PLUG WITH BARED WIRES IS DANGEROUS IF ENGAGED IN A LIVE SOCKET.

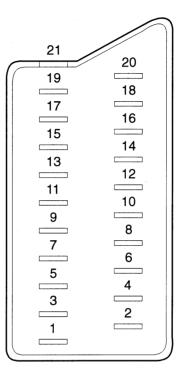

When an alternative type of plug is used, it should be fitted with a **5AMP FUSE**, otherwise the circuit should be protected by a **5 AMP FUSE** at the distribution board.

How to replace the fuse. Open the fuse compartment with a screwdriver blade and replace the fuse.

FE-2 SELF DIAGNOSTIC SOFTWARE

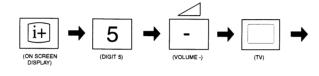

The identification of errors within the FE-2 chassis is triggered in one of two ways: - 1: Busy or 2: Device failure to respond to IIC. In the event of one of these situations arising the software will first try to release the bus if busy (Failure to do so will report with a continuous flashing LED) and then communicate with each device in turn to establish if a device is faulty. If a device is found to be faulty the relevant device number will be displayed through the LED (Series of flashes which must be counted) See table 1., non fatal errors are reported using this method. Each time the software detects an error it is stored within the NVM. See Table 2.

Table 1

Error Message	LED Code
No error	00
Reserved	01
OCP (Over Current Protection)	02
Not Used	03
No Vertical Sync	04
IKR Error at power on	05
IIC bus clock and/or data lines low at power on	06
NVM no IIC bus acknowledge at power on	07
Not Used	08
Tuner no acknowledge at power on	09
Sound Processor Error	10
Jungle controller 8 volts error	11

How to enter into Table 2

- Turn on the main power switch of the TV set and enter into the 'Stanby Mode'.
- Press the following sequence of buttons on the Remote Commander.

3. The following table will be displayed indicating the error

Flash Timing Example: e.g. error number 3

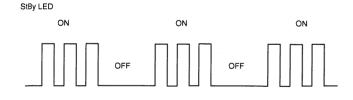

Table 2

Level 3 / Function Level 2

menu allows you to PICTURE ADJUSTMENT
The "Picture Adjustment" malter the picture adjustments To do this: after selecting the item you want to alter press ♦ , then press repeatedly ♦ / ♠ / ♦ / ♦ or ♦ to adjust it and finally press OK to store the new adjustment.

This menu also allows you to customise the picture mode based on the programme you are watching:

- es, DVD Personal (for individual settings).
 Live (for live broadcast programme and Digital Set Top Box receivers).
 Movie (for films).
- Brightness, Colour and Sharpness can only be altered if "Personal" mode is a Hue is only available for NTSC colour signal (e.g. USA video tapes). Select Reset and press OK to reset the picture to the factory preset levels.

Level 3 / Function Level 2

AV2 OUTPUT

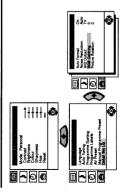

The "AV2 Output" option in the "Detail Set Up"

menu allows you to select the source to be output from the Scart connector ⊕-2/−€3. You can record from this Scart any signal coming from the TV or from external equipment connected to the Scart connector ⊕3 and ⊕3.

If your VCR supports Smartlink, this procedure is not necessary.

To do this: after selecting the option, press ♦ Then press ♥ or ♠ to select the desired output signal: TV, AV1, AV3, YC3 or AUTO.

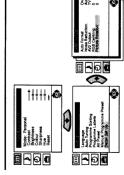

me one that is displayed If you select "AUTO", the output signal will always be the santhe screen. If you have connected a decoder to the Scart G+2/-E3 or to a VCR connected to this Scart, please remember to change back the "AV2 Output" to "AUTO" or "TV" for correct

- 10 -

RGB CENTRING
When connecting an RGB source, such as a "PlayStation" you may need to readjust the horizontal position of the picture. In that case, you can readjust it through the "RGB Centring" option in the "Detail Set Up".

To do this: while watching an RGB source select the "RGB Centring" option and press Then press or To adjust the centre of the picture between -10 and +10. Finally press OK to confirm and store.

PICTURE ROTATION
Because of the earth's magnetism, the picture
might slant. In this case, you can correct the
picture slant by using the option "Picture
Rotation" in the "Detail Set Up" menu.

To do this: after selecting the option, press ♦. Then press ♥ or ♠ to correct any slant of the picture between -5 and +5 and finally press OK to store.

Level 3 / Function

SLEEP TIMER
The "Sleep Timer" option in the "Timer" menu allows you to select a time period for the TV to switch itself automatically into the standby mode. Level 2 Mode Personal Contrast Codern Codern

To do this: after selecting the option press ♦, then press ♦ or ♠ to set the time period delay (max. of 4 hours) and finally press OK to store.

0

While watching the TV, you can press the the button on the remote control to display the time remaining.
 One minute before the TV switches itself into standby mode, the time remaining is displayed on the TV screen automatically.

LANGUAGE
The "Language" option in the "Set Up" menu allows you to select the language that the menus are displayed in.

ВВ

To do this: after selecting the option, press \spadesuit and then proceed in the same way as in the step 2 of the section "Switching On the TV and Automatically Tuning".

Ô

Teletext

Teletext is an information service transmitted by most TV stations. The index page of the teletext service (usually page 100) gives you information on how to use the service. To operate teletext, use the remote control buttons as indicated below.

 Δ Make sure to use a broadcast channel with a strong signal, otherwise teletext errors may occur.

To Switch On Teletext:

After selecting the TV channel which carries the teletext service you wish to view, press ■.

TELETEXT

To Select a Teletext page:
Input 3 digits for the page number, using the numbered buttons.

I you have made a mistake, retype the correct page number.

If the counter on the screen continues searching, it is because this page input another page number.

To access the next or preceding page: Press PROG + () or PROG - ()

To superimpose teletext on to the TV:
Whilst you are viewing teletext, press (B). Press it again to cancel teletext mode.

GB

tically. To stop them, press To freeze a teletext page:
Some teletext pages have sub-pages which follow on autr
も)母. Press it again to cancel the freeze.

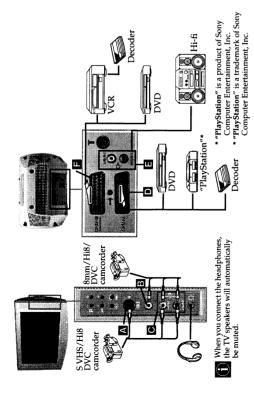

To reveal concealed information (e.g. answer to a quiz):
Press (日/〇). Press it again to conceal the information.

Fress O.

Fastext
Fastext service lets you access pages with one button push.
While you are in Teletext mode and Fastext is broadcast, a colour coded menu appears at the bottom of the teletext page. Press the colour button (red, green, yellow or blue) to access the corresponding page.

Connecting Optional Equipment

Using the following instructions you can connect a wide range your TV set. (Connecting cables are not supplied).

ctors A and B at To avoid picture distorsion, do not co the same time.

- 11 -

Connecting a VCR:

To connect a VCR, please refer to the section "Connecting the aerial and VCR" of this instruction manual. We recommend you connect your VCR using a scart lead. If you do not have a scart lead, tune in the VCR test signal to the TV programme number "0" by using the "Manual Programme Preset" option. (for details of how to manually programme these presets, see page 13, step a).

Refer to your VCR instruction manual to find out how to find the output channel of your VCR.

Connecting a VCR that supports Smartlink:

Smartlink is a direct link between the TV set and the VCR. For more information on Smartlink, please refer to the instruction manual of your VCR.

If you use a VCR that supports Smartlink, please connect the VCR by using a Scart lead to the Scart G*2/-{§} [

Connecting to external Audio Equipment:

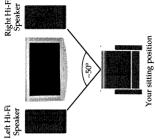

Plug in your Hi-Fi equipment to the audio output sockets **I** if you wish to amplify the audio output from TV. Next, using the menu system, select the "Sound Adjustment" menu. Enter the "Detail Adjustment" option and set "TV Speakers" to "Off".

The audio level of the external speakers can be modified by pressing the volume buttons on the remote control. Also treble and bass settings can be modified through the "Sound Adjustment" menu.

To enjoy "Dolby Virtual" sound effect through your Hi-Fi equipment:

Place the speeders of your equipment in front of your sitting place and besides the TV set but keep a distance of 50 cm from each speaker to the TV set.

Then by using the menu system, select the menu "Sound Adjustment". Next select "Detail Adjustment" and set "Dolby Virtual" to "On".

Using Optional Equipment

В

- Connect your equipment to the designated TV socket, as indicated in the previous page. Switch on the connected equipment.
- To watch the picture of the connected equipment, press the lacktriangle button repeatedly until the correct input symbol appears on the screen.

Input Signals Symbol Θ_1

- \bullet S Video Input signal through the front S Video input jack \blacksquare and Audio signal through \blacksquare **(P**)
 - 4 Press igcup button on the remote control to return to the normal TV picture.

For Mono Equipment Connect the L/G/S/I socket on the front of the TV and select $\Theta 3$ or $\Theta 3$ input signal using the instructions above. Finally, refer to the "Sound Adjustment" section of this manual and select "Dual Sound" "A" on the sound menu screen.

Troubleshooting

Here are some simple solutions to the problems which may affect the picture and sound

Problem	Solution
No picture (screen is dark) and no sound.	• Check the aerial connection. • Plug the TV in and press the ① button on the front of the TV. If he TV. • If the standby indicator ۞ is on, press TV I/ ۞ button on the remote control.
Poor or no picture (screen is dark), but good sound.	Using the menu system, select the "Picture Adjustment" menu and select "Reset" to return to the factory settings.
No picture or no menu information from equipment connected to the Scart connector.	• Check that the optional equipment is on and press the Dutton repeatedly on the remote control until the correct input symbol is displayed on the screen.
Good picture, no sound.	• Press the ∠ +/- button on the remote control. • Check that "TV Speakers" is "On" on the "Sound Adjustment" menu. • Check that headphones are not connected.
No colour on colour programmes.	 Using the menu system, select the "Picture Adjustment" menu and select "Reset" to return to factory settings.
Distorted picture when changing programmes or selecting telefext.	• Turn off any equipment connected to the Scart connector on the rear of the TV.
Picture slanted	• Using the menu system, select the "Picture Rotation" option in the "Detail Set Up" menu to correct the picture slant.
Noisy picture when viewing a TV channel.	Using the menu system, select the "Manual Programme Preset" menu and adjust Fine Tuning (AFT) to obtain better picture reception. Using the menu system, select the "Noise Reduction" option in the "Detail Set Up" menu and select "Auto" to reduce the noise in the picture.
No unscrambling or unstable picture whilst viewing a scrambling channel with a decoder connected through the Scart connector $(\overrightarrow{e}^*Z)/-\overrightarrow{e}S)$.	• Using the menu system, select the "Set Up" menu. Then enter to "Detail Set Up" option and set "AV2 Output" to "TV".
Remote control does not function.	• Check that the Media Selector on the remote control is

GB

Accessories supplied: 1 Remote Control (RM-932) 2 Batteries (IEC designated)

Check that the Media Selector on the remote control is set according to the device you are using (VCR, TV or DVD).

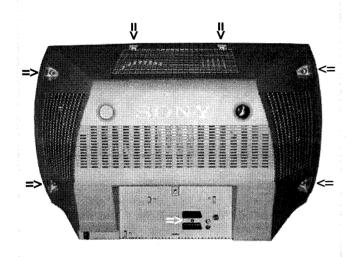

If the remote control does not operate the VCR or DVD even when the Media Selector has been set correctly. Enter the necessary code set as explained on "Remote Control Configuration for VCR/DVD" chapter of this instruction manual.

Replace the batteries. The standby indicator **©** on the TV flashes.

If you continue to experience problems, have your TV serviced by qualified perso Never open the casing yourself.

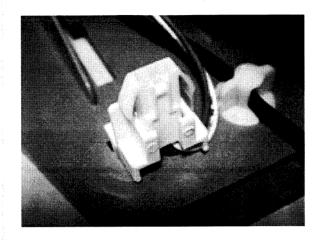

SECTION 2 DISASSEMBLY

2-1. Rear Cover Removal

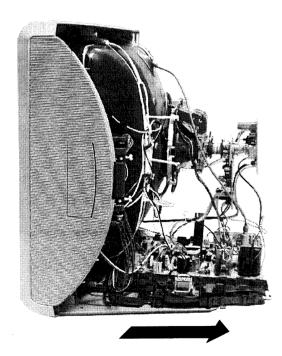

Release the mains power cable from its securing posts.
Remove the rear cover fixing screws indicated. Pull the rear cover away from the front beznet. Take care when removing the rear cover not to damage the speaker cables as speakers are fitted inside the rear cover.

2-2. Speaker Connector Disconnection

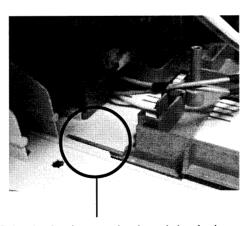

Before completely removing the rear cover disconnect the speaker connectors which are located on the inside base of the beznet.

2-3. Chassis Removal and Refitting

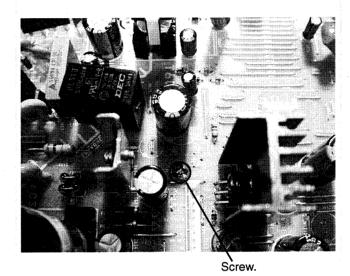

To remove lift the main bracket rear slightly and slide the chassis away from the beznet. Ensure that the interconnecting leads are released from their purse locks to prevent damage being caused.

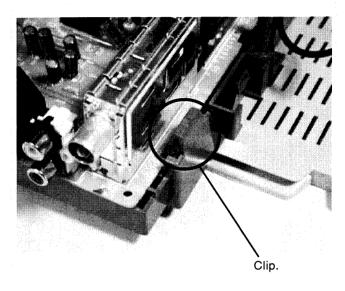

When refitting the chassis ensure that the main bracket is located in the beznet guide slots before sliding the chassis forwards. Refit the interconnecting leads in their respective purse locks.

2-4. A Board PWB Removal [Step 1]

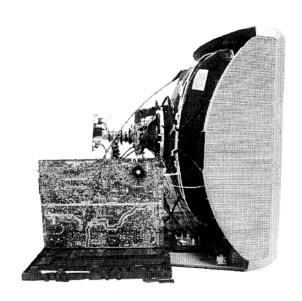

Remove the screw securing the PWB to the main bracket.

2-5. A Board PWB Removal [Step 2]

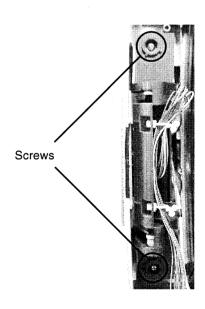

Release the 5 securing clips located at the side and front of the chassis and slide the PWB clear of the bracket.

2-6. Service Position

Place the A Board PWB in the position indicated to carry out servicing.

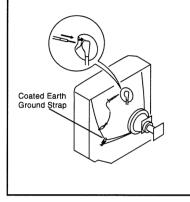

2-7. Side Control Module Removal

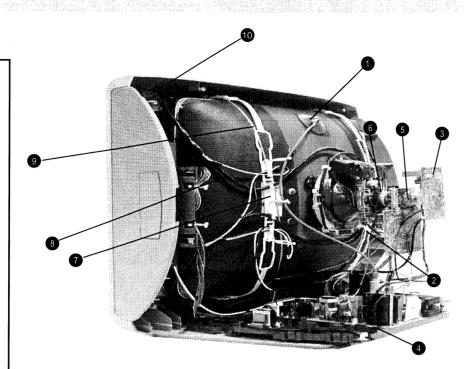

Remove the two screws fixing the user control module to the side of the set. The control module can then be removed by sliding it towards the rear of the set allowing access to the H2 Board.

WARNING: **BEFORE REMOVING** THE ANODE CAP

High voltage remains in the CRT even after the power is disconnected. To avoid electric shock, discharge CRT before attempting to remove the anode cap. Short between anode and CRT coated earth ground strap.

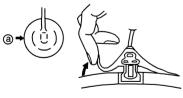

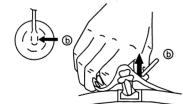

- 1. Discharge the anode of the CRT and remove the anode cap.
- Unplug all interconnecting leads from the Deflection yoke, neck assy, degaussing coils and CRT grounding strap.
- Remove the C Board from the CRT.
- Remove the chassis assembly.
- 5. Loosen the Neck assembly fixing screw and remove.
- Loosen the Deflection yoke fixing screw and remove.
- Place the set with the CRT face down on a cushion and remove the Degaussing Coil holders.
- Remove the Degaussing Coils.
- 9. Remove the CRT grounding strap and spring tentioners.
- 10. Unscrew the four CRT fixing screws [located on each CRT corner] and remove the CRT. [Take care not to handle the CRT by the neck.]

Removal of the Anode-Cap

* REMOVING PROCEDURES.

(1) Turn up one side of the rubber cap in the direction indicated by the arrow (a)

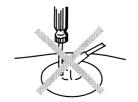

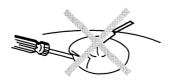

2 Using a thumb pull up the rubber cap 3 When one side of the rubber cap is firmly in the direction indicated by the arrow (b)

separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling it up in the direction of the arrow (c)

How to handle the Anode-Cap

- 1. To prevent damaging the surface of the anode-cap do not use
- 2. Do not apply too great a pressure on the rubber, as this may cause damage to the anode connector.
- 3. A metal fitting called a shatter hook terminal is fitted inside the rubber cap.
- Do not turn the rubber foot over excessively, this may cause damage if the shatter hook sticks out.

SECTION 3 SET-UP ADJUSTMENTS

- When complete readjustment is necessary or a new picture tube is installed, carry out the following adjustments.
- Unless there are specific instructions to the contrary, carry out these adjustments with the rated power supply.
- Unless there are specific instructions to the contrary, set the controls and switches to the following settings:

Contrast 80% [or remote control normal]

Brightness

Carry out the adjustments in the following order:

Beam Landing.

3-2. Convergence. 3-3. Focus.

White Balance.

Test equipment required. Note:

Color bar/pattern generator.

Degausser.

Oscilloscope.

Digital multimeter.

Preparation:

- In order to reduce the influence of geomagnetism on the set's picture tube, face it in an easterly or westerly direction.
- Switch on the set's power and degauss with the degausser.

3-1. Beam Landing

- 1. Input an all white signal from the pattern generator. Set the Contrast and Brightness to normal.
- Set the pattern generator raster signal to Red.
- Move the deflection yoke forward and adjust with the purity control so that the Red is at the centre and the Blue and Green take up equally sized areas on each side of the screen. [See Fig.3-1 - 3-3].
- Move the deflection yoke backwards and adjust so that the entire screen becomes Red. [See Fig.3-1]
- Switch the raster signal to Blue, then to Green and verify the condition.
- When the position of the deflection yoke has been determined, fasten the deflection yoke with the screws.
- If the beam does not land correctly in all the corners, use a magnet to correct it. [See Fig.3-4]

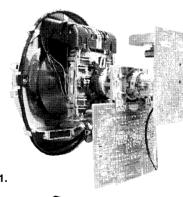

Fig. 3-1.

Caution:

High voltages are present on the Deflection yoke terminals - take care when handling the Deflection yoke whilst carrying out adjustments.

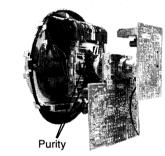

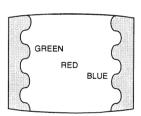

Fig. 3-3.

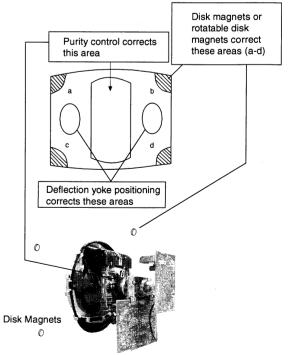

Fig.3-4

3-2. Convergence

Preparation:

- Before starting this adjustment, adjust the focus, horizontal size and vertical size.
- Minimize the Brightness setting.
- Input a dot pattern from the pattern generator.

Horizontal and Vertical Static Convergence

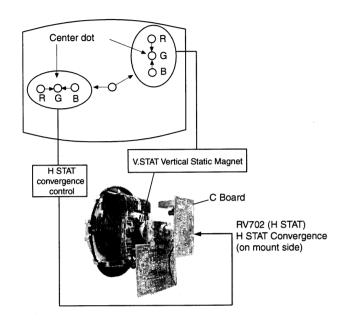

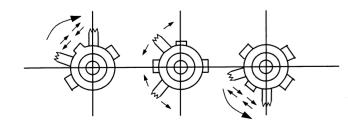

Fig.3-5

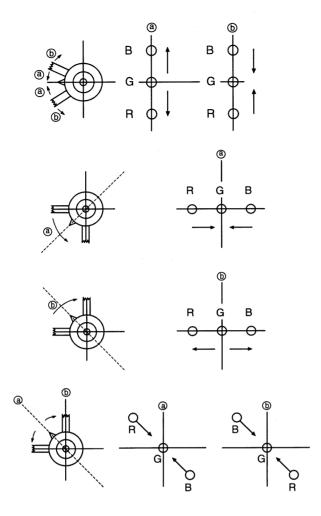

- 1. [Moving horizontally], adjust the H.STAT control so that the Red, Green and Blue points are on top of each other at the centre of the screen.
- 2. [Moving vertically], adjust the V.STAT magnet so that the Red, Green and Blue points are on top of each other at the centre of the screen.
- If the H.STAT variable resistor is unable to bring the Red, Green and Blue points together at the centre of the screen, adjust the horizontal convergence with the H.STAT variable resistor and the V.STAT magnet in the manner indicated below

[In this case, the H.STAT variable resistor and the V.STAT magnet influence each other].

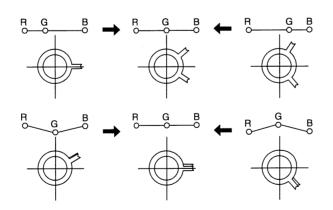

• Tilt the V.STAT magnet and adjust the static convergence by opening or closing the V.STAT magnet.

4. If the V.STAT magnet is moved in the direction of the (a) and (b) arrows, the Red, Green and Blue points move as indicated below.

Operation of the BMC (Hexapole) magnet.

The movement of the magnets interact with each other and so the respective dot position should be monitored while carrying out this adjustment.

Use the H.STAT VR to adjust the Red, Green and Blue dots so that they coincide at the centre of the screen

(by moving the dots in the horizontal direction).

Geometry Adjustment.

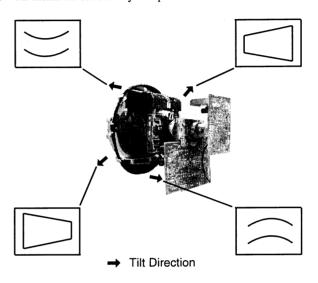

Preparation:

Before starting this adjustment, adjust the horizontal and vertical static convergence.

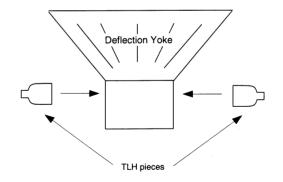

- 1. Remove the deflection yoke spacer.
- Tilt the deflection yoke as indicated in the figure below and optimise the geometry.
 Tilting the DY Up and Down will balance the upper and lower pin adjustment.

Tilting the DY Left and Right will balance the H-Trap adjustment.

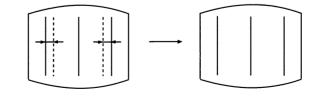

3. Re-install the deflection yoke spacer.

HTIL Adjustment

HTIL correction can be performed by adding a TLH correction assembly to the Deflection yoke.

YCH Adjustment

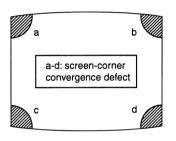

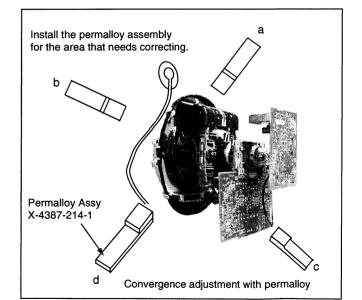

TLV Adjustment

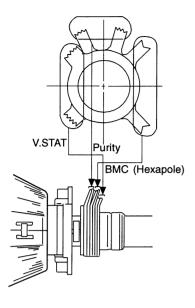

Screen Corner Convergence

If you are unable to adjust the corner convergence properly, this can be corrected with the use of permalloy magnets.

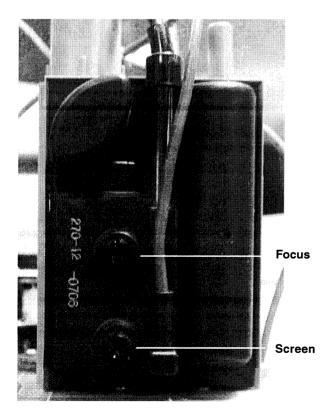

Layout of each control

3-3. Focus Adjustment

- 1. Receive a television broadcast signal.
- 2. Normalize the picture setting.
- Adjust the focus control located on the flyback transformer
 to obtain the best focus at the centre of the screen.
 Bring only the centre area of the screen into focus, the
 magenta-ring appears on the screen. In this case, adjust the
 focus to optimize the screen uniformly.

3-4. Screen (G2), White Balance

[Adjustment in the service mode using the remote commander]

G2 adjustment

- 1. Input a dot signal from the pattern generator.
- Enter the 'Service Mode' by pressing 'TEST', 'TEST' and '38' (TT-38) on the remote commander, to set up the G2 service adjustment mode.
- Whilst watching the picture, adjust the G2 control [SCREEN] located on the Flyback Transformer to the point where the OSD menu indication shows "OK".

White balance adjustment for TV mode

- 1. Input an all-white signal from the pattern generator.
- 2. Enter into the 'Service Mode' by pressing 'TEST', 'TEST' and 'MENU' on the Service Commander.
- 3. Select 'Service' from the on screen menu display and press the right arrow button on the remote commander.
- 4. The 'Service' menu will appear on the screen. [See Page 20]
- 5. Set the 'Contrast' to MAX.
- 6. Set the 'R-Drive' to 25.
- 7. Adjust the 'G-Drive' and the 'B-Drive' so that the white balance becomes optimum.
- 8. Press the 'OK' button to write the data for each item.
- 9. Set the 'Contrast' to MIN.
- Adjust the 'G-Cutoff', and the 'R-Cutoff' with the left and right buttons on the remote commander so that the white balance becomes optimum.
- 11. Press the 'OK' button to write the data for each item.

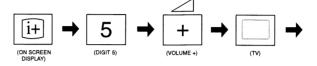

SECTION 4 CIRCUIT ADJUSTMENTS

4-1. Electrical Adjustments

Service adjustments to this model can be performed using the supplied remote Commander RM-932.

How to enter into the Service Mode

- 1. Turn on the main power switch and enter into the stand-by mode.
- Press the following sequence of buttons on the Remote Commander.

'TT—' will appear in the upper right corner of the screen. Other status information will also be displayed.

Press 'MENU' on the remote commander to obtain the following menu on the screen.

Geometry
Service
Design
Status
Sound
IF adjust
Error Menu
FE-2 Stereo v3.44
Factory data 00h FFh
MSP Device : MSP3410G

- Move to the corresponding adjustment item using the up or down arrow buttons on the Remote Commander.
- 5. Press the right arrow button to enter into the required menu item.
- 6. Press the 'Menu' button on the Remote Commander to quit the Service Mode when all adjustments have been completed.

Note:

 After carrying out the service adjustments, to prevent the customer accessing the 'Service Menu' switch the TV set OFF and then ON.

Sub Colour Adjustment

- 1. Receive a PAL colour bar signal.
- 2. Connect an oscilloscope to Pin 5 of CN3003 [A Board].
- 3. Enter into the 'Service' service menu.
- 4. Adjust the 'Sub Colour' data so that the Cyan, Magenta and Blue colour bars are of equal levels as indicated below.

Sub Brightness Adjustment

- 1. Input a Monoscope pattern.
- 2. Press 'TEST' 'TEST' 13 on the Remote Commander.
- 3. Adjust the 'Sub-Brightness' data so that there is barely a difference between the 0 IRE and 10 IRE signal levels.

Sub Contrast Adjustment

- 1. Input a video signal that contains a small 100% white area on a black background.
- 2. Connect an digital voltmeter to Pin 10 of J7001 [C Board].
- Adjust the Sub-Contrast ['TT11'] to obtain a voltage of 105 +/- 5V.

4-2.TEST MODE 1:

Test Mode 1 is available by pressing the 'TEST' button once, OSD 'T' appears. The functions described below are available by selecting the indicated keys. The 'T' is released automatically after each command is executed.

KEY	T-MODE FUNCTION
volume +	volume maximum
volume -	Picture minimum

SECTION 6 EXPLODED VIEWS

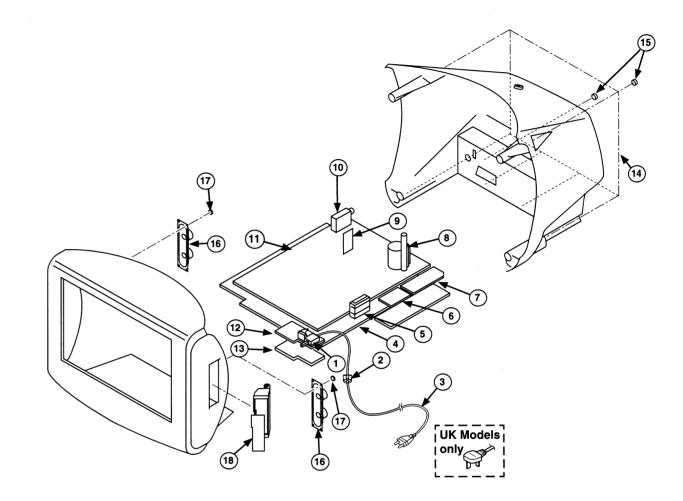

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remarks column.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

Note: Les composants indentifies par une trame et par une marque ∆ sonte d'une importance critique pour la securite. Ne les remplacer que par des pieces du numero specifie.

Note: The components identified by shading and marked △ are critical for safety. Replace only with the part numbers specified in the parts list.

TRACE

A new TV Repair Assistance Tool that combines ease of use and powerful PC software tools to allow you to save valuable time during many TV repairs.

The TRACE interface connects to the PC's serial port. It provides connection to the TV's I²C bus and can be provided with an InfraRed transmitter (optional).

The interface is powered by a standard 9 V PP3 battery for portable use, and can also be powered by an external 9V/25mA DC power supply.

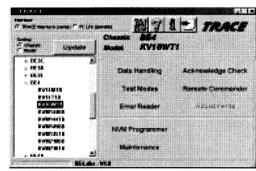

The TRACE software that is supplied with the interface allows you to:

- Read, restore and compare NVM contents via the I²C bus
- Acknowledge check of all I²C devices in the TV set
- Read Error Codes (emulation of the Error Reader tool)

With the optional IR Add-on kit, the following features can be added:

- Remote Commander emulation
- User programmable Functional Check through Infrared
- Fast and documented Test Mode setting of all Sony TV chassis

Additional features such as Adjustments and Troubleshooting are available in chassis-dependent software modules. Please contact your local Sony Service organisation for the latest information.

Note: For workshops already using the existing I²C Link parallel port interface (9-948-320-30), this software can be used as well, replacing the TV Data Handling software (9-948-340-50), but Error Reader and IR functions can only be accessed with the TRACE interface.

Partnumbers: TRACE Starter Kit (TRACE interface + software): 9-948-320-70

TRACE Software (for users of the I²C Link interface): 9-948-340-80
TRACE IR Add-on (IR interface + Remote Commander software): 9-948-320-80

PC requirements: IBM-compatible PC with operating system Windows95, Windows98, or WindowsNT*.

* WindowsNT only supported with TRACE interface
